

Session	Start-ups/SMEs looking for Finance: Series A and Series B/C Funding
Title	PFx Biotech: Scaling Bioactive Proteins for Healthier Future, Smarter Investment
Company	PFx Biotech
Speaker	Ali Osman
Keywords feedstock (max 2)	Glycerol
Keywords technology (max 2)	Precision fermentation, biomanufacturing
Keywords End-Product (max 2)	Lactoferrin, other bioactive proteins
Abstract:	
PFx Biotech is a European biotech innovator producing multiple bioactive proteins via engineering biology and precision fermentation, delivering sustainable, scalable solutions with global impact. Our proprietary platform generates high-purity proteins such as lactoferrin and other breast milk-identical proteins, supporting immunity, gut health, women and elderly health, and infant nutrition. With proven execution at 1,500 L scale and a clear roadmap to pre-industrial demonstration at 15,000 L by mid-2026 and with market-attractive unit economics, PFX Biotech demonstrates reproducible, industrial-scale production and operational excellence. Regulatory dossiers are underway for multiple key markets, while strategic customers advance from lab testing to beta trials, validating real-world performance. Backed by the EIC Accelerator grant and up to €7 million from the European Investment Bank, PFX Biotech combines multi-protein innovation with rigorous execution, offering investors the chance to drive both human health impact and environmentally responsible production, positioning the company to lead the next wave of the global bioeconomy.
