Title	Scaling thousands of tonnes of Marine Whey affordable nutrition in 26-27
Company	Nutrition from Water (NXW)
Speaker	Alex Worker, Founder
Keywords feedstock (max 2)	Sugar
Keywords technology (max 2)	Biomass fermentation
Keywords End-Product (max 2)	Marine Whey
Abstract:	
Nutrition from Water (NXW) is scaling production of its breakthrough Marine Whey™ platform to thousands of tonnes across 2026–2027, marking a major step toward global, aquatic-derived nutrition. Leveraging biomass fermentation, NXW transforms underutilized aquatic resources from microalgae into high-performance, affordable protein ingredients for use in food, beverages, and wellness applications. The current stage of scale-up will enable commercial supply partnerships across Asia-Pacific with first market focus in Japan, as well as focus on partnerships and distributors across the Global South where complete nutrition is harder to source. NXW’s mission to make blue biotechnology a cornerstone of the world’s nutrition system — delivering health, accessibility, and sustainability at scale while reducing dependence on land-intensive and carbon-heavy protein production.
