Title	FishMatter – Connecting Blue Bioeconomy Side Streams to New Value Chains
Company	FISH MATTER (B2E CoLAB)
Speaker	Ana Rita Araújo Rbeiro
TRL	TRL 4-7
Keywords feedstock (max 2)	Marine by-products
Keywords technology (max 2)	AI matchmaking
Keywords End-Product (max 2)	Value chains
Abstract:	
FishMatter is a digital platform designed to accelerate the valorisation of marine by-products and other blue bioeconomy side-streams by connecting resources with companies, technologies, knowledge and funding opportunities. The platform combines a marketplace and a knowledge base directory with AI-powered matchmaking, using information about organisations, resources, interests and opportunities to identify relevant partners and potential collaborations. FishMatter brings together information on scientific publications, patents, European projects and funding opportunities, making it easier to discover useful knowledge and potential collaborations in one place. By connecting side-stream holders, technology providers, researchers and companies, FishMatter aims to reduce fragmentation across the blue bioeconomy ecosystem and support the development of new valorisation opportunities. The platform has been developed and is now entering a phase of testing, broader engagement and onboarding of organisations across the blue bioeconomy.
