

Session	Start-ups/SMEs looking for Finance: Pre-seed/Angel/Seed
Title	From food side streams to sustainable packaging
Company	Revita paper
Speaker	Greta Colombo Dugoni
TRL	TRL 4 - 7
Keywords feedstock (max 2)	Agri-food by-products
Keywords technology (max 2)	fibre extraction
Keywords End-Product (max 2)	paper, packaging
Abstract:	
ReVita transforms agricultural and food side-streams into high-quality fibres for paper and packaging. Using a patented process, we recover fibres from locally sourced materials such as rice husks and wheat bran, creating an alternative to wood-based raw materials. The resulting paper combines strength and printability with a distinctive natural appearance and can be processed using existing papermaking and converting equipment. Our technology has been validated in industrial production conditions, and we are working with partners across food packaging and other sectors. At Pitch Perfect, we aim to connect with papermills, packaging producers, brands and investors to scale production and bring circular, traceable materials to more European markets.
